

Report on Brain Hijacking

- **Theoretical things leaked by attackers**

All Human sensors convert physical data into electric signal goes to brain and the brain has a highway attached to Central nervous system that link all the body parts if emulated signal enter to this highway it will be counted as physical data received by the target organ

- **Possible Causes**

anything touch human nerves and can output a signal – it's external sensor count as original sensor

anything touch human nerves and cannot output a signal-it's a external organ count as original organ

- **Effects**

in the case of a thing that can output a signal he could perform any action as the main person

in the case of a thing that cannot output a signal the effect can be treated and known

- **Uses**

bad: Cause diseases

good : Treating patients until they recover
